Observation of Botanical field trip

The Botany department of Maa Bharti P.G. College conducted a visit to Abhedha Biological Park for P.G. students in which students participated actively and gained valuable information regarding the diversity of different plant species and also studied about ecological adaptation. Students also collected various samples of plants including algal species to prepare herbarium sheets.

Objectives:

- The major objective is to familiarize the students with the flora and ecology of the region.
- In plant sciences field education is equally important as classroom teaching as it adds vigor in learning processes and relieves monotonies of indoor education.
- Students can collect plant samples to prepare herbarium.
- Provide knowledge of the habitat, morphology and status of various plants.
- It will help to identify and study various plant species in their natural habitat.

Outcomes:

- The knowledge will help to know the diversity, distribution, habitat and morphology and their status (healthy, diseased, infested, mutilated, misused or dying) of different flora.
- It helps to create awareness about the kind of flora in urban ecosystems.
- It helps the students to develop the skills in field techniques such as specimen collection, data recording, and use of field guides or keys for plant identification.
- It helps the students in species identification and make them aware about medicinal value of prevalent flora.
